| | A STATE ENGINEER State Engineer | | | | |

The attached application for the appropriation of ground water is for the purpose of supplying water for the construction and operational phases of the MX Missile System in Coal Valley. The attached application is one of nine for appropriation of ground water in the valley. Each application is for 384 acrefeet per year of ground water resulting in a total quantity of 3456 acrefeet per year for the ground water basin. This is a conservative figure and is greater than that which will likely be required annually during the construction period. The 3456 acrefeet are requested for only a one to two year construction period within a span of five years beginning in 1984 and ending in 1989. Construction of roads and a possible construction plant and camp are expected to commence about one year prior to shelter construction and will require less than one fifth of the 3456 acrefeet figure. Ground water required for road construction is included in the 3456 acrefeet for shelter construction. Following construction the operational ground—water use is expected to be less than 300 acrefeet per year. This reduced quantity of ground water will be needed for the life span of the system which will be approximately 20 years.

The ground water for construction will be used for road compaction, dust suppression, shelter construction, miscellaneous structures, and possibly construction plants and camps. Ground water for the operational phase will be used for maintenance and surveillance facilities personnel as well as other possible support systems.

The place of use of the ground-water, as indicated on the attached water rights survey map, covers the entire valley in anticipation of the probably broad areal extent of construction activities. It is possible that once the construction planning has been completed, a request may be filed to change the point of diversion on the attached application to a more strategic location, however, the above stated total quantity of ground water-will remain the same.
